Professional Summary

Senior full-stack engineer with 8+ years building TypeScript systems in digital banking, across React, Next.js, and Node.js. Owns Krom Bank's identity and access governance platform, the system of record for access decisions across internal applications. Previously spent three years on Jenius Flexi Cash lending backends through 147% user-base growth.

Experience

Krom Bank (digital bank, Indonesia)

Jan 2023 – Present

Senior Full-Stack Engineer

Jakarta, Indonesia

- Built the bank's identity and access governance platform from scratch on Next.js (App Router), React, TypeScript, and Node.js, covering RBAC administration, employee directory, audit logging, and periodic user access review. It is now the system of record for access decisions across internal applications.
- Specified a CASL approval framework that stores permissions as JSON data instead of hardcoded conditionals.
- Designed HRIS-driven account provisioning as checkpointed BullMQ and Redis workflows. Provider mutations stay separate from local finalization, so a retry is idempotent when a third-party call fails halfway.
- Cut average API execution time by 37% by refactoring legacy modules and adding targeted caching.
- Published a shared npm package for authentication, structured logging, and feature flags, adopted by four production applications through Express.js and Next.js adapters.
- Built a multi-agent pull-request reviewer on AWS Bedrock, Bitbucket, and Slack. Four specialist agents review diffs in parallel against retrieved repository context, with confidence and security gates before a finding can post.
- Delivered an internal operations platform end to end as primary engineer, introducing Next.js to the team and integrating third-party telephony with partner-company engineers.
- Authored the Git workflow standard used by 5+ teams. Mentor two engineers, run design and code review, and built Datadog dashboards and tracing that other teams adopted as their monitoring template.

Bank SMBC Indonesia (Jenius)

Dec 2019 – Dec 2022

Back End Engineer

Jakarta, Indonesia

- Built and operated Flexi Cash lending backends on Node.js, Express.js, GraphQL, MongoDB, Redis, and Kafka, covering loan origination, funding disbursement, and retail-partner APIs.
- Designed Kafka event-driven partner integrations and kept origination and disbursement stable through a 147% user-base increase over three years from launch.

PT Iverson Technology

Dec 2017 – Dec 2019

Technical Consultant

Jakarta, Indonesia

- Customized Microsoft Dynamics AX ERP workflows for enterprise clients including JNE and Gramedia, built integrations across data warehouse, enterprise portal, and point-of-sale systems, and trained hundreds of professionals at 2+ companies.

Technical Skills

Core: TypeScript, JavaScript, Node.js, Express.js, GraphQL, REST, React, Next.js (App Router), Mantine

Architecture: System design, distributed workflows, idempotent retries, caching, event-driven integration, RBAC, CASL, audit logging, HRIS provisioning

Data & platform: MySQL, MongoDB, DocumentDB, Redis, Kafka, BullMQ, AWS (ECS, EKS), Kubernetes, Docker, CI/CD, Datadog

Practices: RFC authoring, Git workflow standards, design and code review, shared package ownership, mentoring

Education

RWTH Aachen University, DAAD Exchange, Information Technology

Oct 2014 – Nov 2015

KMUTNB, DAAD Exchange, Information Technology

Aug 2013 – Sep 2014

BINUS University, B.S. Computer Science

Mar 2011 – Jun 2013

Selected Achievements

- Won an internal AI engineering competition and presented spec-driven development to Krom Bank engineering teams.
- DAAD scholar at KMUTNB and RWTH Aachen. Top-performing teaching assistant at BINUS University.
