Professional Summary

Senior software engineer with more than 10 years of experience designing and delivering full-stack web applications using JavaScript and TypeScript, with deep expertise in both front-end and back-end engineering. Brings proven experience across fintech and SaaS, spanning customer-facing products and large-scale systems. Specializes in building secure, scalable, and reliable solutions that support both customer needs and core business operations. Driven by continuous learning, creative problem-solving, persistence, and effective collaboration across engineering teams and business stakeholders.

Experience

Krom Bank (digital bank, Indonesia)
Senior Full-Stack Engineer

Jan 2023 – Present
Jakarta, Indonesia

- Built the bank's identity and access governance platform from scratch on Next.js (App Router), React, TypeScript, and Node.js, spanning RBAC administration, employee directory, audit and compliance logging, and periodic user access review; it is now the system of record for access decisions across internal applications.
- Built and published a shared internal npm package for authentication, structured logging, and feature-flag management, adopted by four production applications through Express.js and Next.js adapters.
- Authored the Git workflow standard now governing 5+ teams on one shared codebase, covering branch architecture, Conventional Commits, PR approval gates, hotfix paths, and release tagging.
- Originated and specified a reusable approval framework on CASL that models permissions as data-driven JSON rather than hardcoded conditionals.
- Designed an HRIS-integrated account auto-provisioning architecture on BullMQ and Redis, moving employee lifecycle changes into access records as queued, retryable jobs.
- Delivered an internal operations platform end to end as primary engineer, introducing Next.js to the team and integrating third-party telephony alongside a partner company's engineers.
- Improved production reliability through targeted API caching, Datadog dashboards, and error-context tracing that other teams adopted as their monitoring template.
- Mentor two engineers, run design and code review, and author the technical documentation that lets other teams extend these platforms independently.

Bank SMBC Indonesia (Jenius)
Back End Engineer

Dec 2019 – Dec 2022
Jakarta, Indonesia

- Built and maintained backend services for Flexi Cash, a digital consumer lending product, on Node.js, Express.js, GraphQL, MongoDB, Redis, and Kafka.
- Developed the APIs, data flows, and Kafka-based integrations behind loan origination, funding disbursement, and partner distribution workflows.
- Built external retail partner integration flows that expanded the product's digital lending distribution.
- Served on the backend team through the product's growth from launch to a 147% user-base increase over three years.
- Improved backend maintainability through service refactoring, integration reliability work, and cleaner error handling.

PT Iverson Technology
Technical Consultant

Dec 2017 – Dec 2019
Jakarta, Indonesia

- Customized Microsoft Dynamics AX ERP workflows for enterprise clients including JNE and Gramedia.
- Translated business requirements into ERP customizations, integrations, and reporting solutions.
- Built integrations spanning data warehouse, enterprise portal, and point-of-sale systems.
- Trained hundreds of professionals at 2+ companies in Dynamics AX customization and implementation practices.

- Taught hands-on programming to hundreds of undergraduates.
- Designed practicum cases and assessment materials, reviewed code, and coached students through project implementation.
- Reached one of the lab's highest assistant grades, taking on a new technical subject and competency assessment every six months.

Technical Skills

Core

TypeScript, JavaScript, Node.js, Express.js, GraphQL, REST API design, React, Next.js (App Router), Mantine.

Identity & Access

RBAC authorization modeling, CASL, periodic access review, audit and compliance logging, multi-level approval workflows, HRIS-driven provisioning.

Data & Messaging

MySQL, MongoDB, DocumentDB, Redis, Apache Kafka, BullMQ, schema design and normalization.

Platform & Operations

AWS (ECS, EKS), Kubernetes, Docker, CI/CD, Datadog dashboards and distributed tracing, production incident diagnosis.

Practices

RFC authoring, API and Git workflow standards, design and code review, shared package ownership, technical documentation, mentoring.

Education

RWTH Aachen University
DAAD Scholarship Exchange Program, Information Technology

Oct 2014 – Nov 2015
Aachen, Germany

King Mongkut's University of Technology North Bangkok (KMUTNB)
DAAD Scholarship Exchange Program, Information Technology

Aug 2013 – Sep 2014
Bangkok, Thailand

BINUS University
Bachelor of Science, Computer Science

Mar 2011 – Jun 2013
Jakarta, Indonesia

Selected Achievements

- Won an internal AI engineering competition and presented the resulting spec-driven development practice to Krom Bank engineering teams.
- DAAD scholarship recipient, KMUTNB and RWTH Aachen international engineering program.
- Recognized as a top-performing teaching assistant at BINUS University.

Languages

Indonesian (Native), English (Professional working proficiency)
